DETAILED ACTION

Allowable Subject Matter

1. Claims 1,4,6-9 are allowed.

Re claim 1, While, Iwamatsu disclose a circuit for processing multichannel audio signals (fig.1/ Lt, Rt to be processed), comprising: a frequency characteristics correction device for correcting frequency characteristics of an audio signal of a center channel, utilizing correction characteristics determined based on a head related transfer function to output a corrected channel with mixing and outputting the signal.

However, Iwamatsu fail to disclose of the specific wherein a band-pass filter for extracting a predetermined frequency band from the corrected signal from the frequency characteristics correction device to output an extracted signal; a band eliminate filter for removing said predetermined frequency band from the corrected signal from the frequency characteristics correction device to output central channel audio signals; an output device for mixing the audio signal component having the frequency characteristics corrected said extracted signal with an audio signal of the right channel and an audio signal of the left channel to generate mixed output audio

signals, and outputting said mixed output audio signals as a right channel output audio signal and a left channel output audio signal.

Similarly, independent claims 8-9 have been analyzed and allowed in view of the same limitations as disclose in claim 1.
